In cooperation with Wyoming Department of Agriculture

1985 WYOMING AGRICULTURAL STATISTICS

It's with pleasure that the Wyoming Crop and Livestock Reporting Service presents this 1985 annual edition of Wyoming Agricultural Statistics, a comprehensive report of farm and ranch statistics. Included in this report are data relating to livestock numbers and production, crop acreages and production, farm income, prices, labor and wage rates, and weather information. State estimates are shown for five to ten years, County estimates of livestock for January 1, 1980-85, and County estimates for crops are shown for 1979-84. This issue updates County data for the years 1979 through 1982 as published earlier.

There are many people who help make this bulletin possible. But mainly we would like to say "THANK YOU" to the Wyoming farmers, ranchers and agricultural product handlers who supplied basic information by completing voluntary questionnaires. Without this voluntary cooperation it would be impossible to make reliable estimates or compile this publication. A special thanks is also extended to the Field Enumerators, Telephone Enumerators, and all members of the Office who had a part in carrying out the surveys, evaluating the results, and establishing the estimates which are presented in this bulletin.

Collection of data for making these estimates is made possible through the cooperative effort of the Wyoming Department of Agriculture and the Statistical Reporting Service of the U. S. Department of Agriculture. Funds are furnished by both departments which have had a cooperative agreement since 1923. Publication of this report was made possible through the cooperative effort of these two agencies along with the University of Wyoming Agricultural Experiment Station, Division of Agricultural Economics.

The mission of the Wyoming Crop and Livestock Reporting Service remains the same as in the past -- to provide reliable, timely agricultural estimates by using statistically sound sampling and estimating procedures. The accuracy of all estimates in this publication are directly related to the cooperation received from Wyoming farmers, ranchers and agribusinessmen.

Additional copies of this publication are available upon request to the Agricultural Statistician, P. O. Box 1148, Cheyenne, Wyoming 82003. Copies may also be obtained from the Commissioner, Wyoming Department of Agriculture, Cheyenne, Wyoming 82002; or Head, Division of Agricultural Economics, University of Wyoming, Laramie, Wyoming 82071.

Samuel J. Hundley
Statistician in Charge

WYOMING CROP AND LIVESTOCK REPORTING SERVICE

Reports Issued During the Year

Report	Frequency	Approximate Date of Publication
GENERAL REPORTS:		
Farm Report (Crop Forecast)	Monthly	May-November (12th of month)
Weather, Crops, and Livestock	Weekly	April-October (Mondays)
Range and Pasture Condition	Monthly	Apr.-November (12th of month)
REPORTS ON CROPS:		
Winter Wheat Seedings	Annual	December 20
Prospective Plantings	Annual	February 15
June Acreage	Annual	July 10
Summary of Small Grains	Annual	December 20
Summary of Row Crops	Annual	January 11
Value of Crop Production	Annual	January 30
Dry Edible Beans	Annual	December 20
Stocks of Grains	Quarterly	Feb., May, July, Nov. (10th of month)
Wheat Varieties	Annual	March
Barley Varieties	Annual	July
REPORTS ON LIVESTOCK, DAIRY, POULTRY, AND LIVESTOCK PRODUCTS:		
Cattle Inventory and Calf Crop	Annual	February 11
Cattle and Calves on Feed	Quarterly	Jan., April, July, Oct.
Cattle Movement (Brand Cert.)	Annual	July
Hog Inventory and Pig Crop	Annual	December 20
Sheep Inventory and Lamb Crop	Annual	January 29
Sheep and Lambs on Feed	Annual	January 29
Sheep Shorn and Wool Production	Annual	March 25
Sheep and Lamb Loss	Annual	April
Sheep Movement (Brand Cert.)	Annual	July
Livestock Slaughter	Monthly	20th of following month
Meat Animals - Production, Marketings and Income	Annual	April 3
Poultry - Egg Production	Quarterly	Mar., June, Sept., Dec. (20th of month)
Milk Cows and Milk Production	Quarterly	Jan., April, July, Oct. (mid-month)
COUNTY ESTIMATES:		
Wheat - (Winter, Spring & All)	Annual	March
Barley	Annual	May
Hay - (Alfalfa and Other)	Annual	June
Livestock Estimates by County	Annual	August
PRICES AND MISCELLANEOUS:		
Farm Labor	Quarterly (3)	May, Aug., Nov. (20th)
Agricultural Prices	Monthly	1st of following month
Farm and Ranch Income	Annual	Mid-October
Farms and Farmland	Annual	August 12
Farm Production Expenditures	Annual	July
"Wyoming Agricultural Statistics"	Annual Bulletin	October

General

Although most of our statistics are collected to prepare estimates for the State of Wyoming which in turn are combined into National totals, we are frequently asked for information on various Counties in the State. We spend considerable resources on generating County estimates for the major crop and livestock commodities in the State. One of our most popular displays at the Wyoming State Fair is how each County ranks in terms of crops and livestock. Below I shall outline the first place Counties. The average size farm is based on the 1982 Census of Agriculture, inventory estimates are based on January 1, 1985 figures, and crops are based on 1984 production.

Sweetwater County has the largest average size farm at 11,469 acres, over 3 times the State's average of 3,781 acres. Teton County has the smallest size farm at 612 acres.

Goshen County had the most cattle and calves on January 1, 1985 with 108,000 head, 8 percent of the State's total and also the most corn production with over 3.5 million bushels, or 59 percent of the total.

Lincoln County supports the most milk cows with 4,900 head, 41 percent of our 12,000 head inventory. Although a severe spring blizzard killed many of our sheep, Johnson County reported 96,000 stock sheep on January 1, the most of any County.

Fremont County farmers and ranchers produced 11 percent of Wyoming's all hay and 12 percent of the alfalfa, making it the leading County for both. Fremont County also produced the most oats in 1984, 17 percent of the total 3.22 million bushels.

Sublette County ranked first in grass or native hay production.

Laramie County harvested almost 3.0 million bushels of winter wheat, 40 percent of the total, more than any other County.

Crook County led in spring wheat production with slightly over 150,000 bushels, or 19 percent.

Park County produced 29 percent of the 1984 barley crop, nearly two-thirds more than second place Big Horn County. Park County also ranked first in dry bean production with almost 200,000 hundredweight.

Washakie County dug over one-third of Wyoming's 1984 sugarbeets, slightly ahead of second place Goshen County.

1/ Sugar beet average price not available until January 1986.
2/ Includes allowance for higher average price of State inshipments and outshipments of feeder pigs.
3/ Estimates discontinued after 1981 crop.
4/ Includes allowance for loans outstanding and purchases by the government valued at the average loan and purchase rate.
5/ Estimates discontinued after 1980 crop.

FARM LABOR

The results of a survey of farm operators indicated there were 3.9 million people working on farms and ranches in the United States during the week of July 7-13, 1985. This total includes self-employed farm operators, unpaid labor, and workers hired directly by the farm operators and agricultural services employees working on farms. The total number is down 3.9 percent from the revised number for the corresponding week last year. Hired workers represented 44 percent of the total. Of these, 1.4 million were hired directly by the farm operators, which was 4.3 percent fewer than in July, 1984. Farm operators and unpaid workers who worked 15 hours or more during the week accounted for 2.2 million workers, 5.1 percent below last year's number.

Wage rates for all hired agricultural workers averaged $4.24 per hour for the United States, up 8 cents from July, 1984. Wages for workers paid on an hourly basis increased 6 cents from last year to $4.18 per hour. Field workers received an average of $4.06 per hour, up 13 cents from 1984; and livestock workers received an average of $4.00 per hour, up 7 cents from last year.

Approximately 41 percent of the hired workers received perquisites such as meals, housing, bonuses, or motor vehicle use in addition to cash wages in July, 1985. About 11 percent of all hired workers received housing in addition to a cash wage. Last year, nearly 42 percent of hired workers received some type of fringe benefit. The Farm Production Expenditure Survey of 1984 indicated that perquisites represented 16 percent of total farm and ranch labor expenditures.

Farm Labor: Number of Workers, Hours Worked and Wage Rates, Mountain Region I 1/ 2/ 1983-85, U. S. 1985

Year	Number of workers			Weekly hours worked			Wage Rates

SPRING FREEZE HAZARD TABLE

NOTE: Persons using this table should establish the temperature relationship between one or two of the nearest stations listed and their own locale. This is because the generally rough terrain of Wyoming produces many variations in climate from one point to the next.

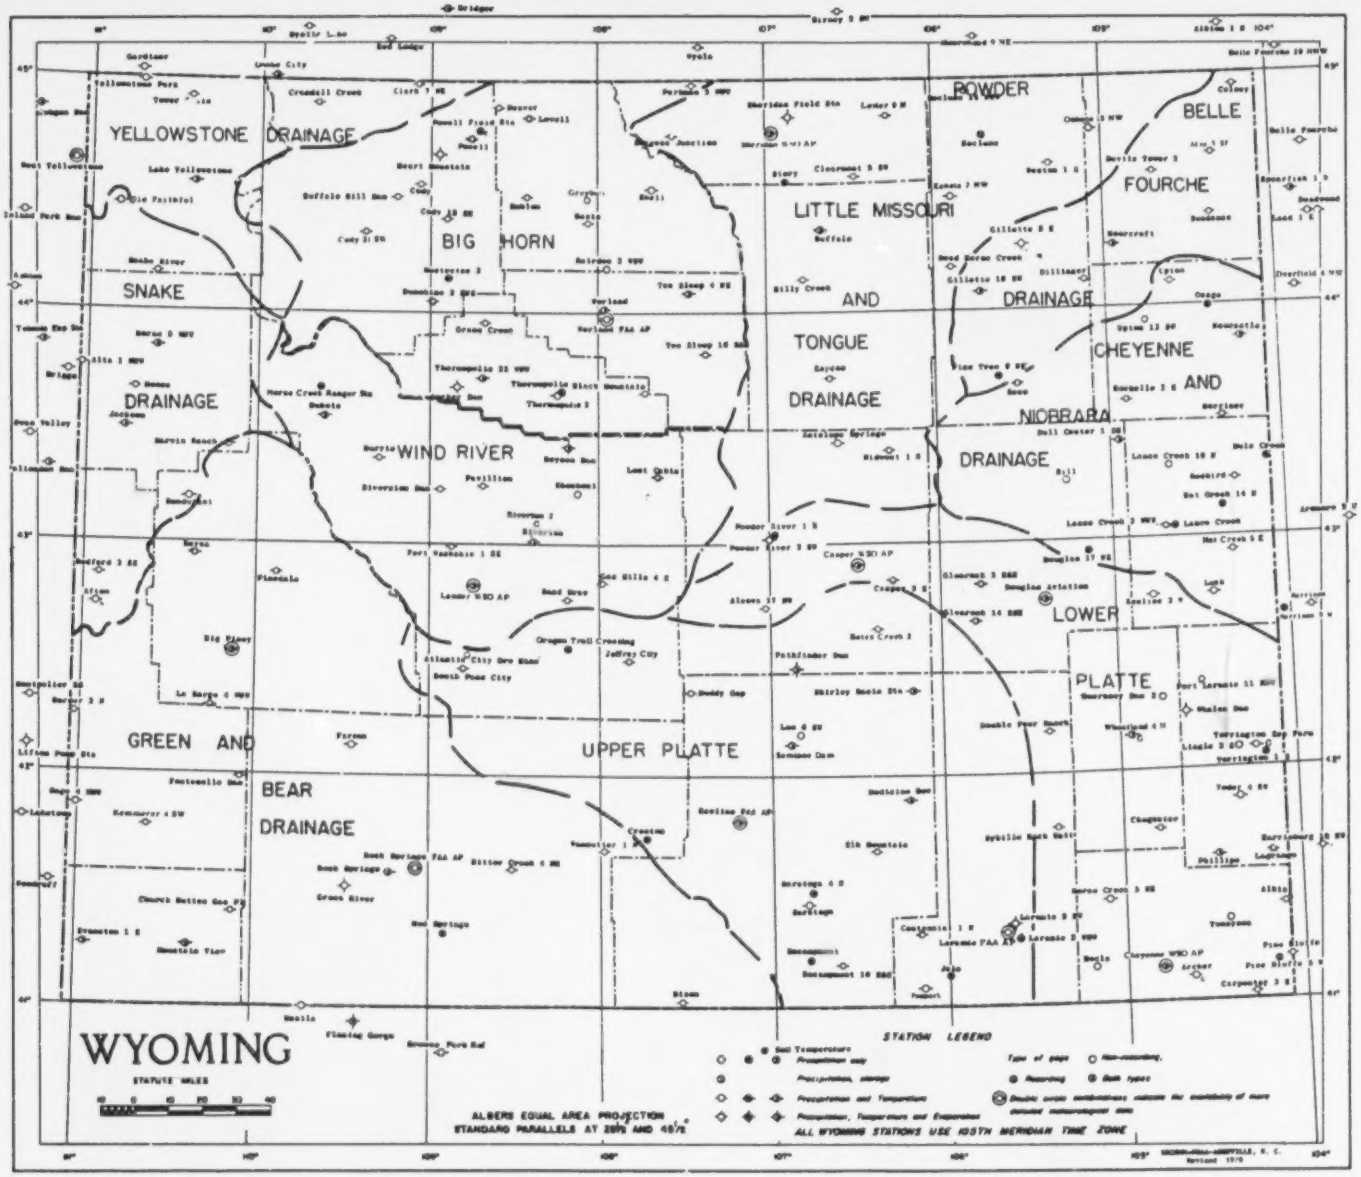
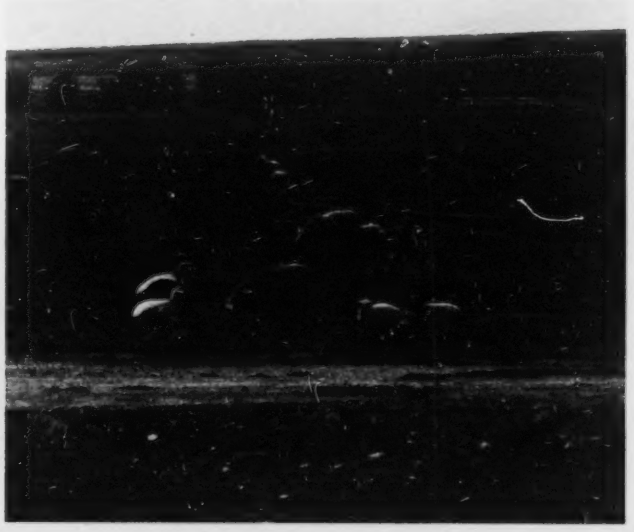
RIVER DRAINAGE AREAS



Livestock



L I V E S T O C K

Wyoming livestock producers faced extreme hardship during 1984, as hard-hitting spring blizzards on top of a severe winter, reduced livestock inventories to record low levels. Nearly 229,000 sheep and lambs were lost due to weather conditions during 1984, accounting for a record high 64 percent of the sheep and lamb deaths. Cattle and calf deaths were the highest since 1975. Average cattle prices for 1984 showed some improvement from the previous year; however, only in the steer and heifer class. Both cow and calf prices declined from previous year levels. Sheep and lamb prices were stronger in 1984, with lamb prices showing the greatest improvement.

CATTLE and CALVES on Wyoming farms and ranches totaled 1,365,000 head as of January 1, 1985, a 2 percent decrease from January 1, 1984. Goshen County continued to rank first in cattle and calf numbers, followed by Carbon and Fremont Counties. Cattle on feed for slaughter market on January 1, 1985 rose 69 percent from last year's inventory to 110,000 head. The number of all cows that have calved in the State fell 7 percent to 630,000 head, the lowest level since 1978. Beef cow replacement heifers showed a 2 percent increase from the previous year and were estimated at 119,000 head. The 1984 calf crop in Wyoming, as a result of the year's adverse weather, dropped to 635,000 head, the lowest level since 1979. The January 1, 1985 average value per head for cattle was $380.00, an increase of $5.00 a head from last year.

The number of MILK COWS in Wyoming herds during 1984 averaged 11,800 head, 1 percent below the 1983 inventory. Milk production for 1984 dropped from the previous year's output to 132 million pounds with each cow producing an annual average of 11,186 pounds of milk. The average price received for milk rose ten cents from 1983 to $13.10 per hundredweight.

The number of all SHEEP and LAMBS on farms and ranches in Wyoming on January 1, 1985 declined 21 percent from a year earlier to 860,000 head. This total included 740,000 stock sheep and 120,000 sheep and lambs on feed for slaughter, down 23 percent and 8 percent, respectively. This stock sheep inventory is the lowest since 1884. The 1984 lamb crop for Wyoming totaled 540,000 head, 21 percent below 1983 and also the lowest level since records began in 1924. Sheep producers averaged 73 lambs per 100 breeding ewes in flocks at the beginning of the year, compared to 96 lambs per 100 ewes in 1983.

The value of the State's sheep and lamb inventory on January 1, 1985, at $53.3 million, dipped 8 percent from a year earlier despite an increase in average value. The average value per head, of $62.00, is up $9.00 from the previous year.

Wyoming sheep producers lost a total of 359,300 sheep and lambs to all causes during 1984. Although total losses were up 113 percent, weather-related losses, at 228,700 head, were five times greater than 1983. During 1984, weather-related losses accounted for 63.6 percent of total sheep and lamb deaths, a record high, compared with the previous worst weather-related loss of 35.4 percent in 1975 and 39.7 percent in 1978. Total predator losses, at 81,800 head, were up 24 percent from the 66,100 head loss incurred during 1983.

WOOL production during 1984 totaled 7,945,000 pounds, 2,539,000 pounds less than that produced in 1983. Total value of wool produced in Wyoming during 1984 was $7,468,000, 5 percent above 1983. The annual average price per pound of wool increased 26 cents from 1983 to 94 cents per pound for 1984.

The number of HOGS and PIGS on hand December 1, 1984 was estimated at 25,000 head, down 7 percent from the previous year. Breeding stock remained the same as last year at 4,000 head, while the number of market hogs dropped 9 percent to 21,000 head. The pig crop for 1984 totaled 17,000 head, down 11 percent from 1983, with an average of 7.0 pigs per litter from 2,400 sows farrowing. The average value per head increased $13.50 from the previous year to $74.50 per head in 1984.

CHICKENS in Wyoming's commercial and farm flocks as of December 1, 1984 totaled 40,000 birds, down 5 percent from a year ago.

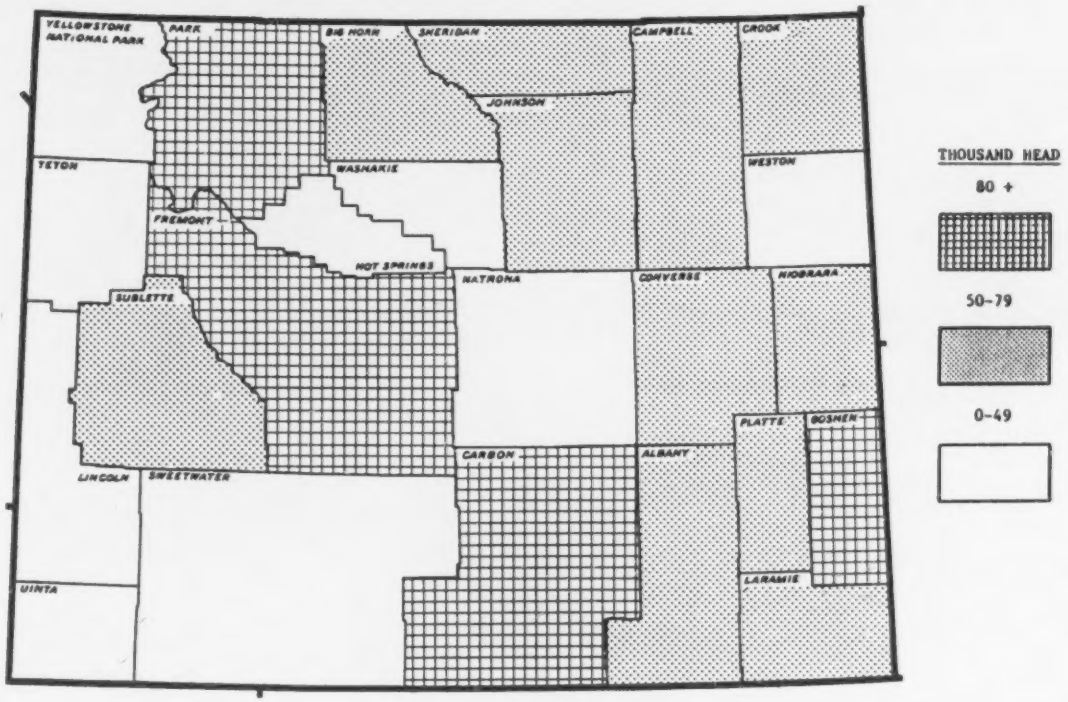
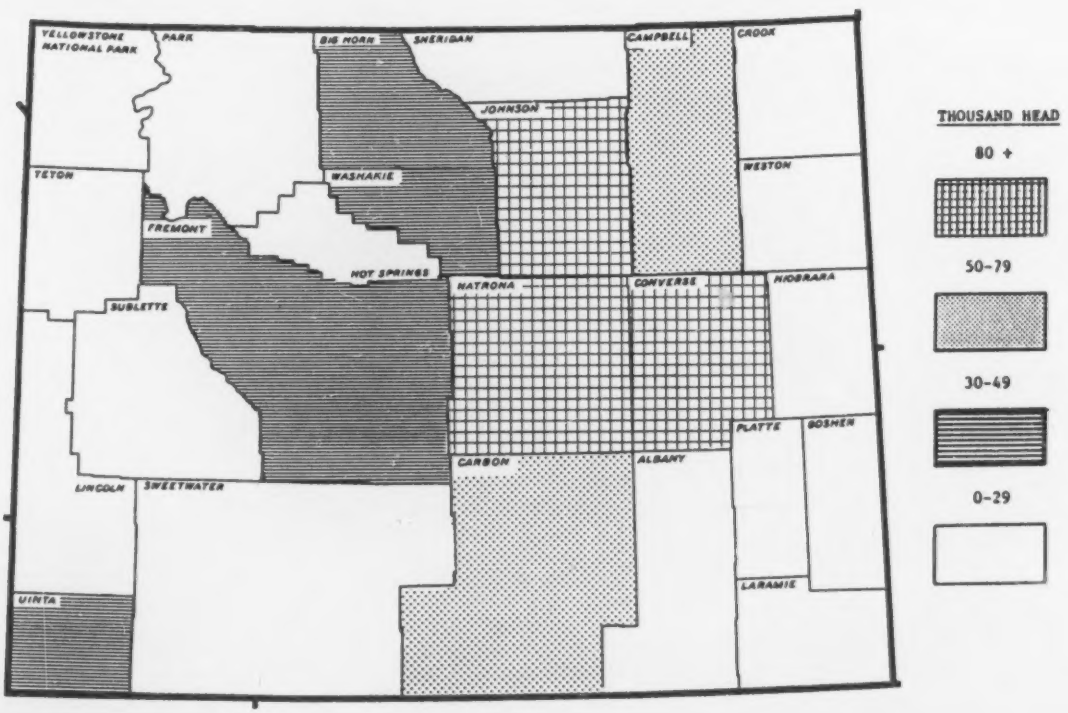
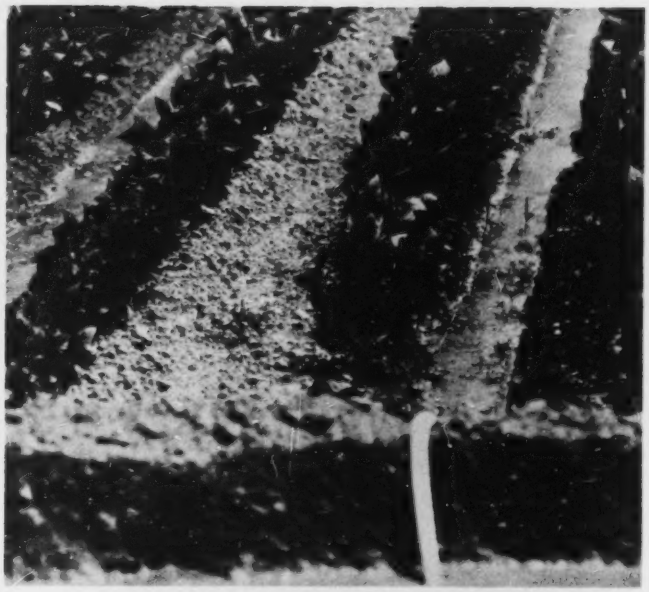
ALL CATTLE AND CALVES ON WYOMING FARMS AND RANCHES, JANUARY 1, 1985

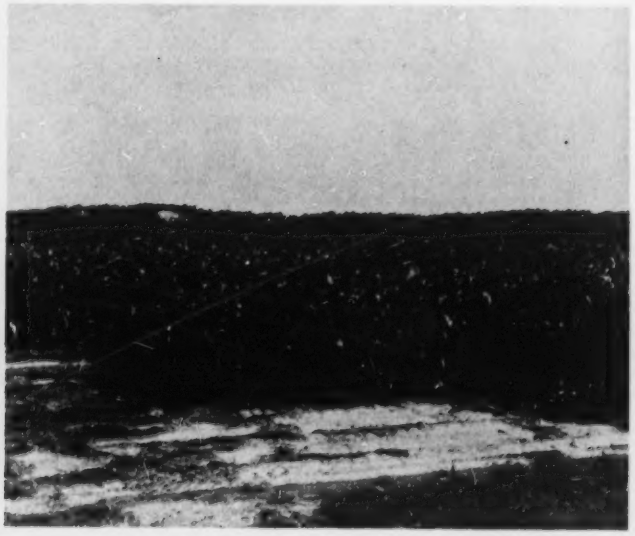


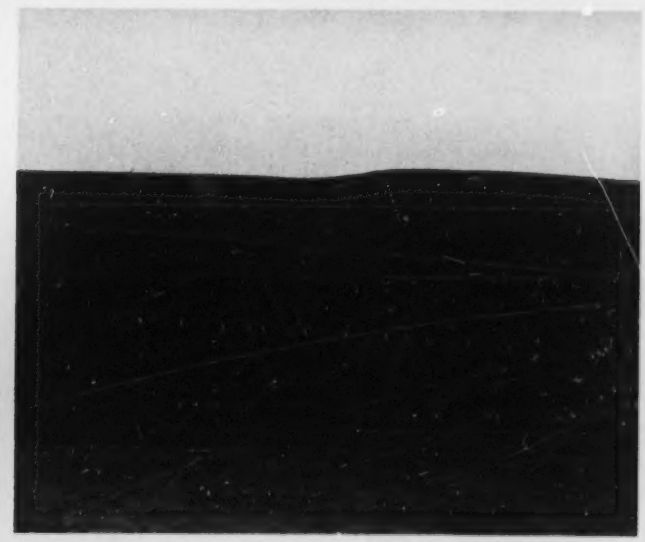
STOCK SHEEP ON WYOMING FARMS AND RANCHES, JANUARY 1, 1985





Crops





C R O P S

The winter of 1983-84 brought bitter cold temperatures to Wyoming. Spring planting got off to a slow start in late March. Farmers were busy plowing, fertilizing and planting crops as the weather permitted during April. Wet fields and snow cover, along with below normal temperatures slowed fieldwork. Two major spring storms during late April halted fieldwork. Winter kill in winter wheat became apparent during late April and early May. Some of the acreage was replanted to other crops. Planting and other fieldwork progressed rapidly during May as fields dried out.

June weather was mild and farmers made rapid progress on fieldwork. Most of the spring seeded crops had emerged by June 1.

Hot, dry weather prevailed during July accelerating the growth and maturity of crops, but most crops were later than normal due to the wet, cool spring. Grasshopper infestation became apparent in mid-July. The winter wheat harvest got underway in mid-July and progressed slower than normal.

During August above normal temperatures and precipitation continued to speed growth and maturity of crops. Harvesting of winter wheat and spring planted small grains progressed rapidly with little interruption. Seeding of the 1985 winter wheat crop began in late August.

September brought above normal temperatures and below normal precipitation. Harvesting of crops progressed rapidly. Stormy weather at the end of the month slowed fieldwork and most areas received a killing frost. The potato crop was severely damaged and much of the crop was lost. Farmers hurried to harvest crops as they matured and as the weather permitted.

The total 1984 Production Index of Field Crops in Wyoming, at 139 percent of the 1957-59 base, was unchanged from 1983.

WINTER WHEAT production, at 7,280,000 bushels, was down 12 percent from 1983. Average yield, at 28 bushels per acre, was 5 bushels below the previous year. Farmers harvested 260,000 acres, 10,000 more than in 1983. Farmers seeded 290,000 acres of winter wheat for harvest in 1985. This is 10,000 acres, or 3 percent below the 1984 level.

SPRING WHEAT production was up 11 percent from 1983 with 792,000 bushels. An average yield of 36 bushels per acre was obtained from 22,000 acres harvested.

BARLEY production totaled 10,400,000 bushels, up 4 percent from 1983. Average yield, at 65 bushels, was one bushel less than last year. Harvested acres, at 160,000, was up 8,000 acres from the previous year.

OAT production, at 3,220,000 bushels, was down 5 percent from last year. Farmers harvested 70,000 acres with an average yield of 46 bushels per acre. Harvested acres were up 1,000, while average yield declined 3 bushels per acre from 1983.

CORN production totaled 6,000,000 bushels, down 15 percent from 1983's record crop. Farmers harvested 60,000 acres with an average yield of 100 bushels per acre. Silage production of 816,000 tons was up 23 percent from 1983. Yields averaged 17 tons per acre from 48,000 acres harvested as corn for silage.

DRY BEAN production, at 759,000 hundredweight in 1984, was over twice the 324,000 hundredweight output in 1983. Farmers harvested 37,000 acres in 1984, but only 18,000 acres in 1983.

POTATO production totaled 520,000 hundredweight, down 28 percent from 1983. Growers harvested 2,000 acres with an average yield of 260 hundredweight per acre.

SUGARBEET production, at 654,000 tons, was up 6 percent from 1983. Growers harvested 32,700 acres, 600 acres more than last year. Yields averaged 20.0 tons per acre compared to 19.2 tons the previous year.

ALFALFA HAY production, at 1,250,000 tons, was unchanged from 1983. Producers harvested 510,000 acres, 10,000 more than a year earlier.

OTHER HAY production totaled 945,000 tons, down 1 percent from 1983. Producers harvested 700,000 acres, 20,000 more than last year.

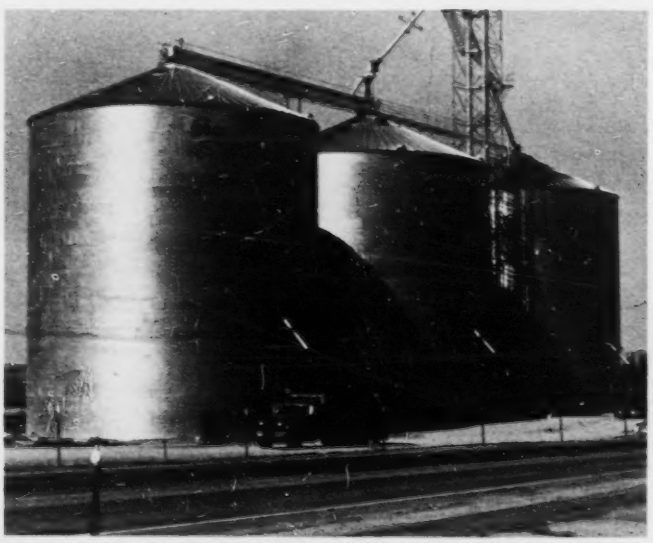
Prices



ALFALFA HAY PRICES BREAK RECORD LEVELS; OTHER PRICES GENERALLY MIXED

Nineteen eighty-four began with Wyoming farmers and ranchers generally receiving prices for cattle below year earlier levels, but surpassing 1983 by year's end. Alternately, most field crops began the year above the previous year, but slumped late in the period. Alfalfa hay set some record highs but it did not last. Prices paid by farmers and ranchers were mixed.

BEEF CATTLE prices never reached $60.00 per Cwt. in 1984 as they typically did at least once in previous years nor did they go below $50.00 per Cwt. as they did at least once during 1982 and 1983. Cow prices were below 1983 and struggled to surpass them while steer and heifer prices were as much as $5.60 per Cwt. above 1983 in October 1984. CALF prices continued the downward trend begun in late 1983, and, although above U. S. levels, never reached $70.00 per Cwt.

January 1984 found SHEEP prices at the lowest level since 1972 and prices were generally below the previous 5 or 6 years through May. Prices showed a $3.50 per Cwt. gain between May and June and ended the year fairly strong. LAMB prices showed a healthy increase beginning in mid-1984 and ended the year in the low $60.'s, the best July-December price in several years. HOG prices reached the low $50.'s twice during the year, but tended toward the mid to upper $40.'s. WOOL prices were above 1983 levels as much as 40 cents per pound and averaged over $1.00 in September 1984, the first time the price has surpassed $1.00 since August 1981.

WHEAT prices did not experience much fluctuation in 1984, each month was below 1983 except December when it was a modest four cents above. Alternately, CORN prices averaged $3.32 per bushel in January, 1984, continued strong for several months, but began declining in August, closing the year 5 to 48 cents below 1983. DRY BEANS, while well below the U. S. level throughout 1984, peaked at $18.30 per Cwt. in January, and September and October tied for the low, at $14.30. ALL BARLEY prices, after fluctuating in the $2.50 to $2.80 per bushel range, peaked at $3.55 in July, but fell steadily to an average $2.72 per bushel in December. OAT prices did not experience any severe shifts, averaging in the $1.60 to $1.80 per bushel range.

ALFALFA HAY prices were very strong in 1984, well above the last several years for many months. The first six months saw prices climb into the $70.00 per ton range, the highest price ever received.

Despite a Nationwide decrease in demand, prices paid for farm machinery was generally above 1983. Comparing September 1984 with September 1983, farmers paid an average $400 more for a 30-39 PTO wheel tractor, $1,200 for a 50-59 PTO wheel tractor, $4,000 for a 110-129 PTO tractor, and $2,700 for a 170-240 PTO tractor. Moldboard plows increased $110 for 3 bottoms and showed slight declines for 5 and 7 bottoms. A medium capacity combine averaged $65,800, and a large capacity sold for $90,700, $3,800 and $3,300 more than in September 1983, respectively. Likewise, prices paid for fertilizer in December 1984 were as much as $27.00 per ton above December 1983.

1/ Based on an annual survey made in July and August, reporting data from most recent bill, usually June or July.
2/ Difference between total bill and local bill is other charges (long distance, toll charges, hook-up, and extension phone).
3/ Averages rounded to the nearest tenth of a cent.
4/ Series discontinued in 1980 and following years.

SUBSCRIPTION FORM

The Wyoming Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices recieved and paid by farmers and ranchers, and various other special reports. The reports containing such data and the approximate date of release are shown in the following table.

All reports are FREE to those who provide data used for summarization.

Check (✓) the title of the following report(s) you wish to order. Follow the appropriate mailing instructions for making payment.
